

Missouri's Path to an Energy-Efficient Future

Energy efficiency can help Missouri generate local jobs, avoid thousands of tons of air pollution, and make the state a healthier place to live. Here's why energy efficiency should be central to state plans for a reliable and affordable energy future with clean air and a strong economy.

Energy Efficiency Cuts Waste, Avoids Pollution, and Saves Money

A lot of useful energy is wasted in Missouri. Energy efficiency can reduce this waste, cutting energy costs for Missourians through programs that upgrade their homes, replace old furnaces, and insulate their walls to keep cold air out. This means more money in people's pockets and fewer taxpayer dollars spent on heating and cooling leaky government buildings.

By using energy efficiency to reduce air pollution, Missouri can comply with federal air regulations and strengthen the state economy at the same time. In fact, implementation of a few popular energy efficiency policies can help Missouri meet about **58% of its goal** to cut carbon pollution under the EPA's Clean Power Plan.

How Energy Efficiency Strengthens Missouri's Economy and Cuts Pollution

By adopting a few common efficiency policies, Missouri can cut air pollution and save electricity customers money while the state economy grows. Here are some of the benefits of investing in energy efficiency¹:

Achieving annual energy savings of 1%, coupled with national model building codes and 40 MWs of new combined heat and power, will help Missouri avoid more than 13 million tons of carbon dioxide (CO₂) in 2030. About 4 million MWh of electricity will be saved, eliminating pollution from power plants.

In addition to helping with Clean Power Plan compliance, these efficiency policies will save 76,000 tons of nitrogen oxide (NO_x) and 243,000 tons of sulfur dioxide (SO₂) by 2030. Air pollution can damage the lungs, heart, and brain, so lower emissions mean healthier communities and a higher quality of life.

Missourians can realize large financial benefits from increasing energy productivity. By 2030, efficiency policies will save the people of Missouri \$1.4 billion. These savings can ensure that the state achieves clean air goals while strengthening the economy and reducing electricity costs for vulnerable populations.
