

New Mexico's Path to an Energy-Efficient Future

Energy efficiency can help New Mexico generate local jobs, avoid thousands of tons of air pollution, and make the state a healthier place to live. Here's why energy efficiency should be central to state plans for a reliable and affordable energy future with clean air and a strong economy.

Energy Efficiency Cuts Waste, Avoids Pollution, and Saves Money

A lot of useful energy is wasted in New Mexico. Energy efficiency can reduce this waste, cutting energy costs for New Mexicans through programs that upgrade their homes, replace old furnaces, and insulate their walls to keep cold air out. This means more money in people's pockets and fewer taxpayer dollars spent on heating and cooling leaky government buildings.

By using energy efficiency to reduce air pollution, New Mexico can comply with federal air regulations and strengthen the state economy at the same time. In fact, implementation of a few popular energy efficiency policies can help New Mexico meet **78% of its goal** to cut carbon pollution under the EPA's Clean Power Plan.

How Energy Efficiency Strengthens New Mexico's Economy and Cuts Pollution

By adopting a few common efficiency policies, New Mexico can cut air pollution and save electricity customers money while the state economy grows. Here are some of the benefits of investing in energy efficiency¹:

An annual energy savings target of 1.5%, coupled with national model building codes and 40 MWs of new combined heat and power, will help New Mexico avoid more than 3.8 million tons of carbon dioxide (CO₂) in 2030. More than 6.2 million MWh of electricity will be saved, eliminating pollution from power plants.

In addition to helping with Clean Power Plan compliance, these efficiency policies will save 36,000 tons of nitrogen oxide (NO_x) and 15,000 tons of sulfur dioxide (SO₂) by 2030. Air pollution can damage the lungs, heart, and brain, so lower emissions mean healthier communities and a higher quality of life.

New Mexicans can realize large financial benefits from increasing energy productivity. By 2030, efficiency policies will save the people of New Mexico \$645 million. These savings can ensure that the state achieves clean air goals while strengthening the economy and reducing electricity costs for vulnerable populations.

¹ The information below comes from SUPR2 available for download here: <http://aceee.org/research-report/e1601>. Results are based on current electric generation mix. This mix will likely change by 2030, which could impact the results.
