Meeting the Global Rare Earth Challenge: Molycorp’s Fully Integrated, Mine-To-Magnets Manufacturing Supply Chain

March 2011 Update
This presentation contains forward-looking statements that represent Molycorp’s beliefs, projections and predictions about future events or Molycorp’s future performance. Forward-looking statements can be identified by terminology such as “may,” “will,” “would,” “could,” “should,” “expect,” “intend,” “plan,” “anticipate,” “believe,” “estimate,” “predict,” “potential,” “continue” or the negative of these terms or other similar expressions or phrases. These forward-looking statements are necessarily subjective and involve known and unknown risks, uncertainties and other important factors that could cause Molycorp’s actual results, performance or achievements or industry results to differ materially from any future results, performance or achievement described in or implied by such statements.

Factors that may cause actual results to differ materially from expected results described in forward-looking statements include, but are not limited to: Molycorp’s ability to secure sufficient capital to implement its business plans; Molycorp’s ability to complete its modernization and expansion efforts and reach full planned production rates for rare earth oxides and other planned downstream products; uncertainties associated with Molycorp’s reserve estimates and non-reserve deposit information; uncertainties regarding global supply and demand for rare earths materials; Molycorp’s ability to maintain appropriate relations with unions and employees; Molycorp’s ability to successfully implement its “mine-to-magnets” strategy; environmental laws, regulations and permits affecting Molycorp’s business, directly and indirectly, including, among others, those relating to mine reclamation and restoration, climate change, emissions to the air and water and human exposure to hazardous substances used, released or disposed of by Molycorp; and uncertainties associated with unanticipated geological conditions related to mining.

For more information regarding these and other risks and uncertainties that Molycorp may face, see the section entitled “Risk Factors” in Molycorp Quarterly Report on Form 10-Q for the quarter ending September 30, 2010 filed with the SEC. Any forward-looking statement contained in this presentation, or the Quarterly Report on Form 10-Q, reflects Molycorp’s current views with respect to future events and Molycorp assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future, except as otherwise required by applicable law.

This presentation also contains statistical data and estimates obtained by Molycorp from industry publications and reports generated by third parties. Although Molycorp believes that the publications and reports are reliable, it has not independently verified such data.

THIS PRESENTATION USES THE TERM “RESOURCES” TO DESCRIBE THOSE QUANTITIES OF REE’S THAT ARE POTENTIALLY RECOVERABLE FROM ACCUMULATIONS YET TO BE DISCOVERED. BECAUSE OF THE UNCERTAINTY OF COMMERCIALITY AND LACK OF SUFFICIENT EXPLORATION DRILLING, THE RESOURCES CANNOT BE CLASSIFIED AS RESERVES. INVESTORS ARE ADVISED THAT THE SEC DOES NOT RECOGNIZE RESOURCES. ONLY PROBABLE AND POSSIBLE RESERVES MAY BE DISCLOSED TO INVESTORS IN AN SEC FILING. RESOURCES HAVE A GREAT AMOUNT OF UNCERTAINTY AS TO THEIR EXISTENCE. THERE IS NO CERTAINTY THAT ANY PORTION OF THE RESOURCES WILL BE DISCOVERED AND, IF DISCOVERED, WHETHER THEY COULD BE DEVELOPED ECONOMICALLY. THEREFORE, INVESTORS ARE CAUTIONED NOT TO ASSUME THAT ALL OR ANY PART OF MOLYCORP’S RESOURCES EXIST, OR THAT THEY CAN BE DEVELOPED ECONOMICALLY. ACCORDINGLY, INFORMATION CONCERNING DESCRIPTIONS OF RESOURCES CONTAINED IN THIS PRESENTATION IS NOT COMPARABLE TO INFORMATION INCLUDED IN SEC FILINGS.
Rare Earths Are Critical to Enabling Various Technologies

**Significant REEs**
- Lanthanum
- Cerium
- Praseodymium
- Neodymium
- Samarium
- Dysprosium
- Europium
- Terbium
- Gadolinium
- Yttrium

**Properties**

**Reduces**
- Weight
- Emissions
- Energy consumption

**Allows**
- Greater efficiency
- Performance
- Miniaturization
- Speed
- Durability
- Thermal stability

**Product applications**

**Green Energy**
- Defense Applications

**Hybrid Electric Vehicles**
- High Tech

**Water Treatment**
- Other Applications

*Molycorp intends to produce all 10 of these rare earth elements commercially*
Molycorp has achieved multiple milestones since the IPO in July 2010

| Operational                          | ✔ Fully permitted for construction (including Phase 2 expansion)  |
|                                     | ✔ Recomenced mining operations                                    |
|                                     | ✔ Started construction of Phase 1 project ahead of schedule       |
| Vertical Integration                 | ✔ Commenced sales of XSORBX in 3Q 2010                           |
|                                     | ✔ Non-binding LOI with Hitachi Metals for magnets and alloys      |
|                                     |   - Access to intellectual property to execute “mine-to-magnets” strategy |
| Supply Agreements                   | ✔ Non-binding MOU with Sumitomo Corporation                      |
|                                     |   - Expected to supply cerium and lanthanum-based products at market-based prices |
|                                     | ✔ 2011 Production sold out (>4000 tons REO)                       |
|                                     | ✔ Definitive agreement with W.R. Grace                            |
|                                     |   - Supply of primarily lanthanum-oxide                           |
| Financing                           | ✔ $130mm debt and equity investment in Molycorp through the Sumitomo non-binding MOU |
|                                     | ✔ Advanced to second round for DOE loan guarantee program ($280MM) |
|                                     | ✔ Raised ~$173MM in mandatory convertible preferred stock offering |
Near-Term Plans to Double Production Capacity

**Total REO Production Capacity**
(REO equivalent in metric tons / year)

- **Current**: 3,000-5,000
- **Phase 1 Completion**: 19,050
- **Phase 2 Completion**: 40,000

**Expected production breakdown by REO**

- **Lanthanum oxide**: 28%
- **NdPr**: 16%
- **Other**: 1%
- **Cerium non-metal**: 50%
- **Other Lanthanum products (High purity oxides and metals)**: 5%
Hybrid and Electric Vehicles Demand Drivers:

- Intensive use of rare earths in hybrid and electric vehicles are compounding the traditional use of rare earths
- Hybrid and electric vehicles contain 9-11 kgs of rare earths
- Anticipated rare earth demand from hybrid and electric vehicles is estimated to grow significantly

**Annual Hybrid and Electric Vehicle Sales (000’s)**

Wind Turbines Are a Significant Driver for Rare Earth Magnet Growth

Wind turbine demand drivers

- Global commitment to increasing the presence of wind energy:
  - U.S. EIA estimates >3x increase in installed wind generation 2010-30 to 490GW
  - China is estimated to have allocated >$150bn to become the world’s wind leader
  - Growing European use of offshore wind generation
- Permanent rare earth magnets are used in generators of wind turbines
  - Increased reliability and efficiency – reduces expensive breakdowns and maintenance expenditures
  - Critical element for 3MW+ and off-shore turbine segments
- With the expected JV, Molycorp would have access to the raw materials, IP and technical expertise to be a world-class supplier of permanent magnets

Note: Both magnet consumption and wind turbine impact are middle of IMCOA range

1 IMCOA estimates each megawatt requires 0.4 tons of NdFeB magnets
Global Demand Growth Will Continue to Justify Additional Supply

Global Rare Earths Supply and Demand (mt, REO ±20%)\(^1\)

\(^1\) Does not reflect Molycorp’s potential to increase production to 40,000 mt of REO per year following completion of Phase 2 expansion plan, but instead reflects anticipated production of 19,050 mt of REO per year beginning in 2013

Source: IMCOA (January 2011)
Chinese Exports Constraints Require a Western World Supply Response

Global Rare Earths Forecasted Deficit

Source: IMCOA

1 Based on actual announced quotas through the first half of 2011 and IMCOA forecasts (35% reduction compared with the first half of 2010); Please refer to page 9 of the Form S-1 Registration Statement for information regarding Chinese quotas

2 ROW quota deficit shows the supply deficit that would occur should no REE production outside of China come online

Additional demand drivers
- Government stockpiling
- Further adoption of wind turbine technology
- Potential for China to become a net RE importer
1H 2011 Chinese export quotas continue 7-year downward trend; senior officials warn of declining quotas in the future.

Multiple government initiatives will affect production and price levels: hundreds of illegal mines closed; export licenses reduced; export taxes increased; VAT rebate on exports withdrawn; coordinated pricing sought; environmental reforms; vertical industry consolidation being forced.

Implementation of strict environmental standards expected to “double production costs” (Wang Guozhen, the former VP of China Nonferrous Engineering and Research Institute)

Internal REE demand rising with GDP growth while Chinese production from 2005-2010 relatively stagnant

59% of respondents think China will “become a net importer of rare earths by 2015” in a Metal-Pages.com poll. Senior Chinese officials not ruling out this possibility.
World-Class Mineral Resource at Mountain Pass, CA

- 58 years of operating history
- Mine permit and EIR allow operations through 2040
- Mining operations re-started in Dec. 2010
- Construction of new processing facility underway
- Plan provides for fully installed infrastructure
  - Water
  - Electricity
  - Natural gas pipeline
  - Easy access to Interstates, rail head, and California seaports
- Facility is ISO 9000 and ISO 14000 certified
- Estimated 30+ years mine life based on Phase 1 production plan (15+ years with Phase 2 expansion assuming no increase in recovery rates or additional exploration drilling)
- 191 Employees

Note: See disclaimer for information on reserves and resources
Molycorp’s “Mine-to-Magnets” strategy differentiates us from other early stage concentrate or oxide-only projects, and provides exposure to the high margin metals, alloys, and magnet markets.

Molycorp Business

Rare Earths Mining and Milling

Rare Earths Material Processing

Rare Earths Metals

Rare Earths Alloys

Global Supply Chain:

- ~97% Chinese Production
- ~97% Chinese Production
- ~100% Chinese Production
- 80% Chinese
  - 20% Japanese
  - 3% Europe
- 80% Chinese
  - 17% Japanese
- 3% Europe

1 Dependent on Chinese rare earths feedstock

2 "Molycorp and Hitachi Metals, Ltd. have entered into an agreement regarding the planned formation of joint ventures for the production of rare earth alloys and magnets in the U.S."
Dependent Upon China

Trading One Dependence For Another?

Petroleum Supply Chain

- Crude Oil Recovery
- Petroleum Refining
- Fluid Catalytic Cracking
- Gasoline Production
- Distribution to Filling Stations
- Consumer Access

Dependent Upon Foreign Supplies

Hybrid and Electric Vehicle Supply Chain

- REE Mining/Milling/Concentrates
- Refinement of Ultra-Pure Oxides
- REE Metals Production
- REE Alloys Production
- REE Magnet Manufacture
- Motors & Generators
- Vehicle Assembly

Dependent Upon China
Energy Efficiency Increases and GHG Reductions With On-Site Natural Gas Co-Gen

Higher RE Recovery and Process Efficiency Breakthroughs Allow for Same Amount of Product Using ½ The Ore

Large Reduction of Reagent Use

Near-Zero Wastewater Discharge

Dramatic Reduction in Process Use of Fresh Water
Water Treatment

- Lack of Clean drinking water is a global problem
- XSORBX® unique chemistry removes:
  - Pathogens such as Protozoa, Fungi, Bacterial, Viruses
  - Organic toxins such as Pesticides
  - Heavy metals such as Arsenic, Selenium, and Chromium
- We’re developing man-portable filters to give our troops the cleanest drinking water available

Industrial Process Waste Streams

- XSORBX® ASP, Arsenic Sequestration Process employs the XSORBX® technology in the mining and smelting industry
- Volumetric capacity for specific hazardous materials that exceeds any other commercially available product
- Studies show stable, concentrated waste could potentially be classified as non hazardous
Recycling will be critical to the rare earth industry, and Molycorp will be a leader in the recycling industry.

Molycorp's new plant was designed with recycling in mind.

- Lowest-cost operation in the industry.
- Highly flexible circuit design.
- Recycled REE's can be co-processed with primary production, yielding additional cost savings.

Key focus areas:
- RE phosphors from CFLs
- NdFeB alloy recovery in magnet manufacture
1. Accelerating reestablishment of a defense stockpile
   - DoD working to determine its needs
   - Stockpile reform will require Congressional direction

2. Workforce development and training
   - Very difficult to find candidates with necessary skills, experiences
   - China has over 6000 full time rare earth technologists; the US has about a couple of dozen

3. Recycling as key near-term means of increasing supply
   - Molycorp investigating a commercial path to CFL recycling
   - Critical source of heavy rare earths (Y, Eu, Tb)
   - Key impediment: how to get consumers to respond

4. Revitalizing rare earth academic infrastructure
   - US used to be the intellectual center of rare earth research
   - Now, only one university course on rare earths in the US

5. Commitment to Research and Development
   - Recycling, processing, minimization, substitutes
   - Will also help to build a skilled rare earth workforce
